EndoClean

Escova de limpeza para endoscópio

2.4 - 4.8 mm Di	2200 mm

Descrição: Esta escova de limpeza para canais de endoscópios foi projetada para a limpeza manual de endoscópios e outros instrumentos médicos que possuam canais internos (uma tarefa tradicionalmente realizada com escovas de cerdas reutilizáveis ou de uso único). Diferentemente das escovas convencionais, esta escova substitui as cerdas por limpadores flexíveis. Os limpadores são fabricados com um material polimérico macio que se adapta ao formato interno do canal, proporcionando uma limpeza eficaz e delicada, sem danificar a superfície interna do equipamento.

Uso pretendido: Limpeza manual dos canais internos de instrumentos médicos, como endoscópios.
